RMS: Recipe Management System

- **Recipe Management:** RMS is a web application that helps users create, store, and share recipes. Users can organize their recipes into categories and create custom recipe books.
- **User Experience:** RMS is designed to be user-friendly and intuitive. It features a clean and modern interface, making it easy to navigate and find the information you need.
- **Community Features:** RMS fosters a community of food enthusiasts. Users can share their recipes, follow other users, and rate and comment on recipes.
- **Technology Stack:** RMS is built using a robust technology stack, including a MySQL database, a Node.js backend, and a React frontend. This ensures scalability, reliability, and performance.

Introduction

RMS simplifies recipe management, allowing users to create, store, and share recipes. Our user-friendly platform caters to both experienced chefs and home cooks, enabling them to organize recipes into categories and create custom recipe books. RMS features a powerful search functionality and fosters a community of food enthusiasts who can share recipes, rate recipes, and leave reviews.
